

### URNA 3 - PAGHE

- 1) The first image from NASA's James Webb Space Telescope was released on July 11. The telescope uses the science of light and gravity to see far into the past. It provides the deepest look we've ever seen of the early universe.
  
- 2) Mosa Meat is a company in the Netherlands. Its scientists grow meat in a lab, and it looks just like the meat you buy in a supermarket. Why are people making lab-grown meat? It might be better for the environment.
  
- 3) The rainbow fish grows to about seven centimeters long. The species is new to science and was recently described. This colorful is found in the Maldives, which is a small island nation in the Indian Ocean.
  
- 4) In October, oil poured into the Pacific Ocean near California. Oil covered the water for miles. Beaches were closed. Unfortunately, oil spills are not uncommon. When they happen, they can cause a lot of damage.
  
- 5) Each day, millions of students all over the world eat their school lunches. Then they fill trash cans with uneaten food. Wasted food is a waste of money, a missed chance to feed hungry people, and bad for the environment.

Handwritten signatures and initials in the bottom right corner, including a large signature that appears to be "Dey" and several other initials.
